

# College and University Library Statistics, 1954-55

*Mr. Bentz is associate director of the State University of Iowa Library and chairman of the ACRL Statistics Committee.*

This year the ACRL statistics have taken on a new look and the data have been reproduced from typewritten copy. All libraries, therefore, which were willing to submit reports and which could do so by the deadline have been included even though there are still many gaps in the information supplied.

Seventy-eight per cent of the ACRL membership which responded to the questionnaire sent out with the official ACRL ballot last year favored a separate publication for the statistics. However, the ACRL Board of Directors, meeting at Philadelphia, felt that the statistics should be made available to the general membership without charge.

Several changes were made in the reporting form used in collecting the 1954-55 data. A column was added to include the total of audio-visual expenditures from library budgets. Although it was realized that many libraries do not have separate audio-visual budgets or do not keep separate records for these expenditures, the committee felt this additional, special information might be useful to some librarians.

The number of hours and days in the work week included last year has been changed to the number of working hours in the fiscal year for a professional librarian. This is an attempt to correlate the salaries paid with the length of the work year, excluding vacation and legal holidays.

Ambiguity exists in the total enrollment figure which is requested. To maintain uniformity in reporting these data, the committee asked that the total enrollment correspond to the figure reported to the U. S. Office of Education and published in *Fall*

*Enrollment In Higher Educational Institutions, 1954.* Both Miss Field and Mr. Erickson comment on this problem in their summaries.

Libraries were divided into five categories. Group I consists of those institutions with particularly strong graduate programs. The size of budget or student enrollment was not the determining factor here, as it was between Groups II and III where a total operating budget of \$35,000 was arbitrarily chosen to divide the two groups. Unfortunately, the committee does not have all reports in hand at the time the division by groups needs to be made. The junior colleges are included this year as part of the ACRL statistics. Although all types of libraries should be included, there is some doubt that the ACRL questionnaire is adaptable to this group. Perhaps different information would be desirable for certain groups of libraries.

The ACRL statistics this year were compiled by members of the committee and they represented, with one exception, each type of library included in the respective groups. A tremendous amount of time is required to audit, interpret, and compile this mass of information and the members of the committee who were responsible deserve much credit for their service to the Association. Some observations of each compiler are given below.

## **Group I: Compiled by F. Bernice Field**

Head, Catalogue Department, Yale University Library

One hundred and seven libraries in Group I returned questionnaires this year, including 69 of the 70 whose reports were published last year, 14 listed in Group II last year, and 24 additional ones. All but seven gave some salary data.

The difference in the way statistics are kept in the universities reporting makes comparisons difficult. The enrollment figures for some institutions, for example, include students registered in extension or off-campus courses, part-time students, or non-credit ones; others report only full-time students. Although off-campus and part-time students do not make as much use of the library as those who are full-time and on the campus, in many reports they have been considered in computing the per student expenditure for the library. Since the professional schools are on a graduate level in some universities and an undergraduate level in others, any comparison of these figures is not meaningful.

In general, library budgets show an increase over last year's figures. The salaries paid beginning professional librarians continue to rise, the median having increased from \$3,200 to \$3,336 in the past year. Other medians have increased accordingly, as the tables show.

#### **Group II: Compiled by**

**Joseph N. Whitten**

Librarian, Cooper Union Library

Questionnaires were sent to 161 colleges in this group and responses were received from 78. All reports were used except one where there was an unusual complication in the figures submitted. Medians were determined for all items of each category where the response was clear, and all colleges were included regardless of the amount of salary information submitted.

#### **Group III: Compiled by**

**Clarence Gorchels**

Acting Assistant Director,  
Washington State College Library

One hundred and twelve questionnaires were returned for Group III libraries this year. It is noteworthy that a good majority of the librarians who returned the questionnaires answered faithfully all of the questions applicable to their libraries. A large number of blanks appear in some columns of the published reports, but some of these are due to the nonexistence of appropriate information.

#### **Teachers Colleges:**

**Compiled by Walfred Erickson**

Librarian, Michigan State Normal College,  
Ypsilanti, Michigan

In using this year's compilation of statistics for comparative purposes, one must remember that the enrollment figures include both on-campus and off-campus students. Although a uniformity in reporting was achieved through the use of this figure, since it was also the statistic used by the U. S. Office of Education in the fall of 1954, it fails to provide comparable data in some cases where per capita expenditures are concerned. The college with a disproportionately large extension program will appear to be spending relatively little per student for library purposes.

Another statistic which must be considered cautiously is that referring to size of library staff. It is difficult to know from many of the reports to what extent full or part-time library science instructors or audio-visual specialists are included in the total library staff.

The 90 libraries included in this compilation represent a 50 per cent increase over last year. Twelve returns were not included in the published statistics for various reasons.

#### **Junior Colleges: Compiled by**

**Ruth E. Scarborough**

Librarian, Centenary Junior College

Junior College library statistics for 1952-53 were published in the November, 1953, issue of the *Junior College Libraries Section News-Letter* which contained data on 50 junior colleges. The 1953-54 information for 109 junior colleges was published in the January, 1955, issue of *COLLEGE AND RESEARCH LIBRARIES*, pages 73-75. This year the junior colleges are included with other colleges and universities and are arranged alphabetically by states with the thought that this arrangement will be helpful to the junior colleges in each state or region for purposes of comparison and information. Seventy-five junior colleges in 26 states are represented in this compilation.

In compiling the data, a number of columns were omitted for which so few figures were reported that they serve no purpose.
