

Enrique Mu Wins Carlow University Award

Enrique Mu, PhD, an Associate Professor in the School of Management at Carlow University, and Editor-in-Chief of the *International Journal of the AHP*, was awarded The Dorothy Weber Cochran '43 Award for Excellence in Faculty Scholarship and Research at the Honors Convocation at Carlow on Thursday, April 18, 2013. The Cochran award is the highest level of recognition for faculty scholarship and research at Carlow.

Carlow Provost Margaret McLaughlin and Enrique Mu

"Dr. Mu's scholarship in the field of information technology (IT) and managerial decision-making using the Analytic Hierarchy Process is an example of the kind of scholarship that this award is meant to recognize," said Margaret McLaughlin, PhD, Provost of Carlow University. Dr. Mu worked with City of Pittsburgh officials applying AHP to choose its Cloud Technology, and this work earned him a proclamation from the Mayor of the City, Honorable Luke Ravenstahl, who said Dr. Mu's contribution was key in making the decision.

Most remarkable among Dr. Mu's recent research activities is his work in the use of decision-making methodologies for eyewitness identification, which was funded by Carlow's Grace Ann Geibel Institute for Justice and Social Responsibility as a signature project. His paper on the subject, co-authored with Rachel Chung, PhD, also on the MBA faculty at Carlow, won the best paper award at the International Symposium of the Analytic Hierarchy Process in 2013 in Kuala Lumpur, Malaysia.

Mu is an accomplished scholar and educator, who besides being Editor-in-Chief of the *IJAHP*, is the U.S. Director for the Latin American Society for Strategy. Prior to joining Carlow, he served as Program Director for the dual-degree MBA/MIS program in the Katz Graduate School of Business at the University of Pittsburgh. Before entering academe, he worked for Black Box Corporation, a Pittsburgh-based data communications company, as Business Development Manager for Latin America and as a Customer Support Vice President for Comlasa Ltd., a computing solution firm, in the same region. He has also been a Project Manager for several multimillion-dollar online banking automation projects in Peru, Colombia, Venezuela, and Chile.
