

FROM THE EDITOR

In this second issue of the *Teaching Supplement* Douglas Walton shares some of his innovative ideas and approaches based on his many years of experience. Ron Leonard describes how to use the physical model of a thermometer to test in a very novel way the validity of conditional arguments.

Claude Gratton

Teaching Supplement Editor

Classroom Use of *Teaching Supplement* Material

Teachers may photocopy or otherwise reproduce and make copies of them material in this *Teaching Supplement* **for classroom use**. The rights to all the articles belong to their authors, and the use of any of this material for any other purpose without its author's written permission is strictly prohibited.

Please send material for the *Teaching Supplement* (hard copy and diskette)—examples of assignments, tests, exams; individual examples for classroom use (with, or without, your analysis of them); discussions of textbooks and how best to use them; teaching tips for particular topics; teaching problems (with, or without, your solutions); notices of resources: upcoming conferences, workshops, other journals with useful material; ideas about faculty training or peer coaching; etc.—to (or contact):
