## INFORMATION ABOUT ARTICLE'S RETRACTION

The article entitled “CONDITIONS AND POSSIBILITIES OF GEOTHERMAL ENERGY UTILIZATION FOR ECONOMIC-TOURISTIC DEVELOPMENT”, by Andjelina Marić and Tomislav Pavlović, published in August 2018 in the Journal of the Geographical Institute “Jovan Cvijić” SASA 68(2), pp. 233–248, was retracted and withdrawn from the database of this journal. In this way, it is made impossible to specify the article in the bibliography of the signed authors, as well as its quoting. The main reason for this decision is the similarity between the aforementioned article and the article entitled “CONDITIONS AND POSSIBILITIES OF GEOTHERMAL ENERGY UTILIZATION TO ENHANCE ECONOMIC-TOURISTIC DEVELOPMENT OF JOŠANIČKA BANJA” by Vukašin Šušić, Selim Šaćirović and Andjelina Marić, published in April 2018 in the journal Economic Themes 56(1), pp. 91–04. Both papers show completely identical results of the spring research (discharge of spring, depth, temperature, capacity, energy use, chemical composition, pH values, conductivity, a hardness of water), although the article Marić & Pavlović refers to Vranjska Banja and the article Šušić et al. to Jošanička Banja. Also, the same spring names were given in both articles. Similarities were found in the text and the references used, as well as serious irregularities in citing references. The abovementioned is in contradiction to the principles of good scientific practice and the code of ethics in scientific research. We apologize to the readers of the Journal of the Geographical Institute “Jovan Cvijić” SASA for not observing the mentioned irregularities in due time.
